

硬质合金
CEMENTED CARBIDE
FOR HIGH PRECISION STAMPING

精密冲压 模具材料

九江金鹭硬质合金有限公司
JIUJIANG GOLDEN EGRET HARD MATERIAL CO.,LTD.

公司简介

Company Profile

九江金鹭是厦门钨业核心企业之一，厦门钨业是在上交所上市的集团性股份公司，公司是国家级重点高新技术企业，是国家火炬计划钨材料产业基地，公司建立了国家级的企业技术中心和国家钨材料工程技术中心。

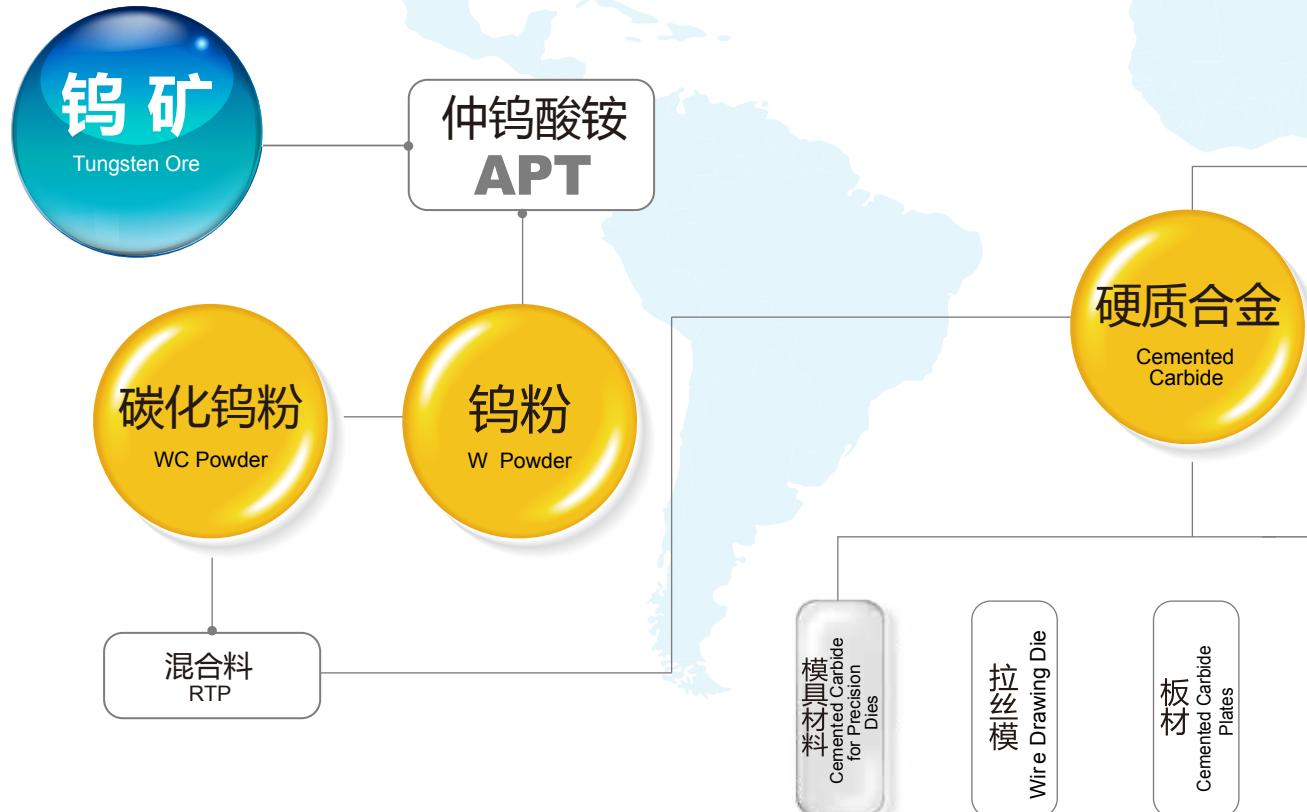

厦门钨业是中国重要的钨粉末和硬质合金出口商，硬质合金占全国出口量的1/3，产品质量达到国际先进水平。

九江金鹭硬质合金有限公司是由厦门钨业与五矿有色共同出资组建的，成立于2011年。公司拥有一支高素质的员工队伍，运用先进的管理理念，专注于开发和生产应用于工业、工程等领域的硬质合金耐磨零件，致力于为广大用户提供高效、耐用、稳定的产品，为客户创造更大的价值。

Jiujiang Golden Egret Hard Material Co., Ltd(GEHM) is one of the core enterprises of Xiamen Tungsten Co.,Ltd (XTC Group).XTC is a key national High-tech corporation, playing the role as the industrial base for China National Torch Program of Tungsten Material. It is one of the top 500 listed companies in China and the largest company with a complete tungsten industry chain in the world.XTC built National Enterprise Technology Center and National Tungsten Material Engineering & Technology Center.

XTC is a leading exporter for tungsten powder and cemented carbide products in China, occupying 1/3 of the cemented carbide exporting volumes in China, the quality of the products reaches the word advanced level.

Jiujiang Golden Egret Hard Material Co., Ltd (GEHM) was founded in 2011 as a joint venture by Xiamen Tungsten Co., Ltd(XTC) and China Minerals Non-ferrous Co., Ltd. With the creative staff and the advanced management concept, GEHM specializes in developing & producing the cemented carbide wear parts that apply to the fields of industry, engineering, construction, etc. dedicating itself to creating more values for the worldwide customers by providing efficient, durable and reliable products.

产业链

Industrial Chain

厦门钨业具有从矿石开采到钨粉末、硬质合金制品及耐磨零件的完整钨产业链。

XTC has a complete tungsten industrial chain which is from tungsten ore to tungsten powder, tungsten carbide powder, cemented carbide and precision wear parts.

精密冲压硬质合金材料

Carbide For Precision Stamping

九江金鹭作为一家全球硬质合金供应商，我们为客户提供高品质的精密冲压硬质合金材料。通过先进的材料科技和制造技术，我们为客户提供一系列的关于金属精密冲压的产品及服务。

As an international tungsten carbide products supplier, Jiujiang Golden Egret Hard Materials Co., Ltd keeps providing high precision stamping materials for various industries. With the foundation of advanced materials technologies and manufacturing technology, our products and services always meet and surpass the customers' demand.

○ 基于不同应用条件的合金材质选择

- GF系列——电机铁芯冲压材料
- GA系列——引线框架、电子连接件冲压材料

○ Carbide material solutions for different applications

- GF Series—Materials for Stamping Motor Core
- GA Series—Materials for Stamping Lead Frame And Electronic Connector

○ 200个标准尺寸规格以及按需求的定制规格

- 标准板材
- 标准圆环
- 定制预型规格

○ 200 standard specifications and other customized specifications

- Standard EDM Blocks
- Standard carbide rings
- Customized carbide preforms

○ 提供专业的应用指导及制造工艺改善

- 更长的模具寿命
- 更好的产品稳定性
- 更高的生产效率

○ Provide professional suggestion to products application and manufacturing process improvement

- Longer life
- Better stability
- Higher efficiency

第四代硬质合金——抗腐蚀硬质合金

The 4th Generation Tungsten Carbide – Anticorrosive Carbide

九江金鹭继承了厦门钨业在模具材料方面的研究成果，为了解决硬质合金在电加工及磨削加工中的缺陷，九江金鹭研发了第四代抗腐蚀硬质合金，大幅度的提升了产品抗腐蚀性。当材料遭遇外界侵蚀时，合金自动激发抗腐蚀机制，在表面形成保护层，抵抗腐蚀，大大提高了模具的使用寿命。

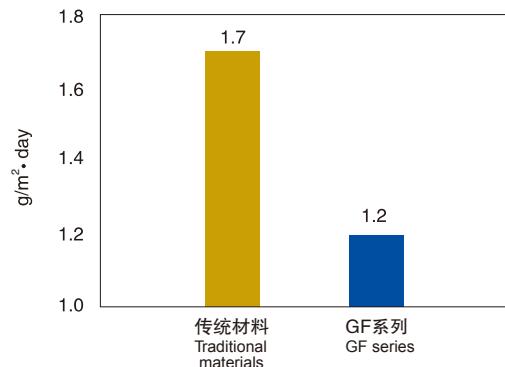

Based on the researching achievement of XTC , GEHM successfully developed the 4th generation carbide which has higher performance in resistance against corrosion. When facing erosion from outside , the carbide's anti-corrosion mechanism will start work , it creates a protective layer on the surface which extends the carbide's application life greatly.

抗腐蚀实验

Corrosion Resistance Test

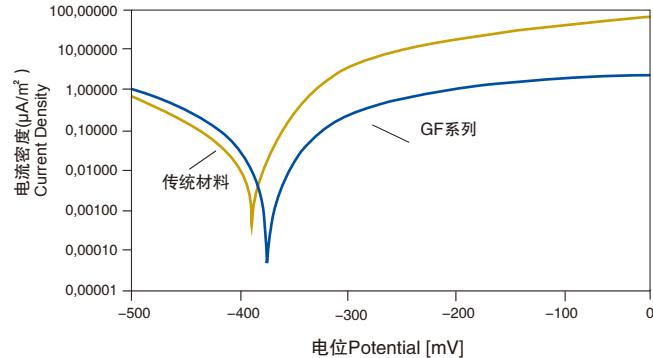

失重法腐蚀试验结果 (10% HCl)

Result of corrosion resistance test in 10% HCl solution

电化学腐蚀实验

Result of electrochemical corrosion test

两者腐蚀结果表明，第四代合金抗腐蚀能力有明显的提高。在粘结剂钴被分解前，抗腐蚀材质会自我持续产生保护层，从而使腐蚀速率大大降低。

The two test results show that the 4th generation carbide has much higher anti-corrosion ability. Before the binder cobalt was broken down, the anti-corrosion element is creating protective layer consistently, thus the corrosion rate is decreased obviously.

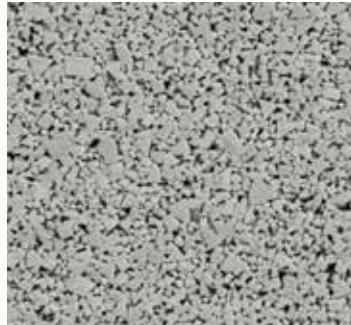

GF系列-电机铁芯冲压材料

GF Series — Materials for Stamping Motor Core

GF系列是为了具有重载冲击条件下冲压模所研究设计的，与传统材料相比GF系列配以中钴、混晶配方，有着优越的冲压韧性、抗震性和抗腐蚀性，有效改善加工过程材质表面耐腐蚀问题及减少裂纹的产生。

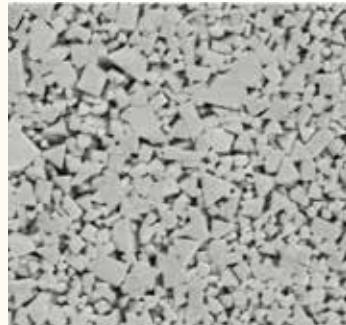

Designed for stamping molds under heavy-duty, GF series are featured in medium cobalt content and mixed tungsten carbide powder grain sizes which make them gain much better anti-impaction ability, higher anti-shock resistance and corrosion resistance. This reduces corrosion and fraction on the surface of finished carbide products.

GF30P NEW

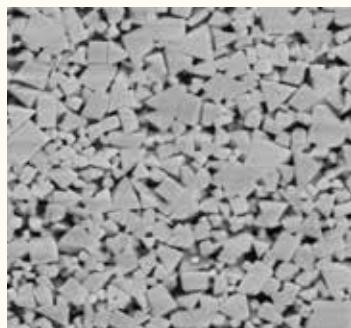

有良好耐磨性同时兼有较高的韧性，适用于微型马达和伺服电机硬度较高的硅钢片 ($\leq 0.35\text{mm}$) 冲压制作。
Has high hardness and fine toughness, suitable for stamping of silicon steel sheet ($\leq 0.35\text{mm}$) with high hardness of micro motor and servo motor.

GF40H

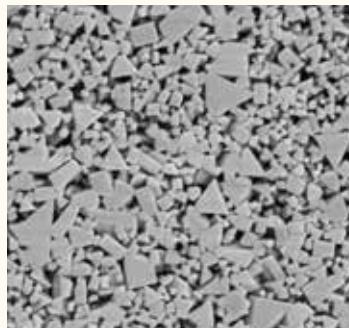

硬度高，耐磨性和韧性方面都表现优越。主要用于传统Y系列电机铁芯制作。
Has high abrasive resistance and toughness as well as high hardness. It's mainly used to producing conventional y series iron core of motor rotor.

GF50H

有着良好的韧性，抗震性能好。可用于结构复杂的无刷电机、伺服电机铁芯的制造。
With good toughness and anti-shock resistance is suitable for producing complex iron core of brushless motor rotor and servomotor rotor. Mini-size iron core of motor rotor.

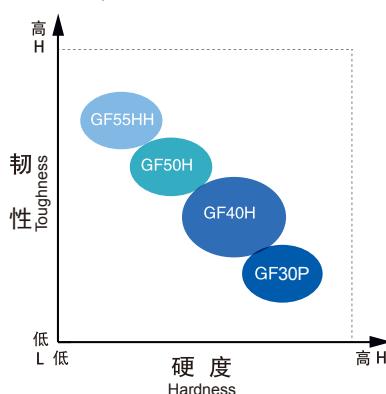

GF55HH

具有极好的抗震性，能应对厚度较大的材料冲压及低速模具冲压。
Has excellent anti-shock resistance which can make it suitable for stamping very thick mold at low speed.

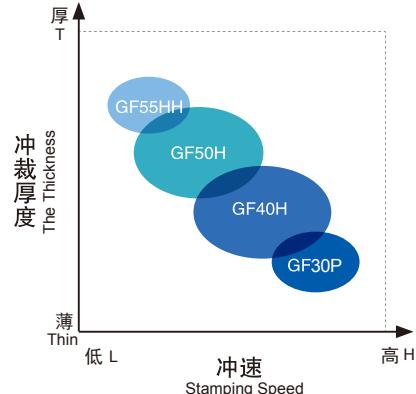

GF系列牌号关系图

Comparison of GF series Grades

GF系列牌号适用范围

Application of GF series Grades

GA系列-引线框架、电子连接件冲压材料

GA Series—Materials For Stamping Lead Frame And Electronic Connector

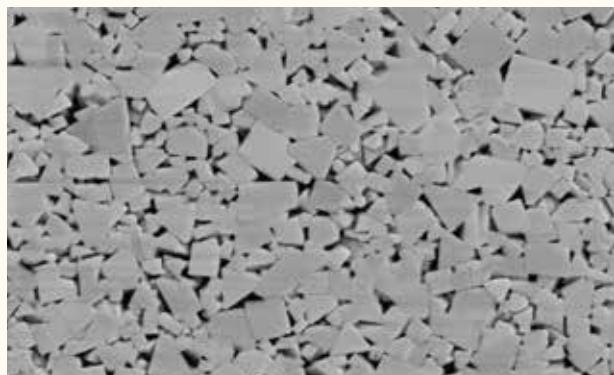

针对SPCC、铁带、铍铜带、304不锈钢等电子零件的高速冲压制造，提供优质方案。在引线框架、接插件及连接器行业备受好评，并获得PG零件加工一致推荐。

GA series provides the best solution for high speed stamping SPCC, steel belt, beryllium copper belt and 304 stainless electronic components, etc. This series is widely recommended by PG components manufacturing field because of its high reputation in lead frame and connector industry.

GA10H

降低了合金与加工材料的亲和性，改善了粘模的问题。适合纯铁、纯铜、SPCC等软质金属的高速冲压。

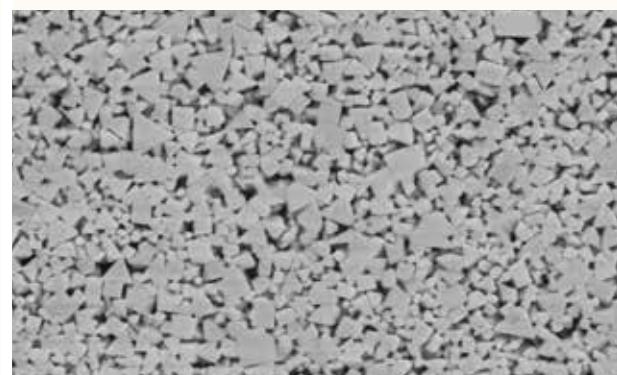

Increases the incompatibility between the carbide mold and the materials, which prevent the material to retain on the mold. This grade is suitable for stamping soft materials like pure steel, pure copper and spcc at high speed.

GA20

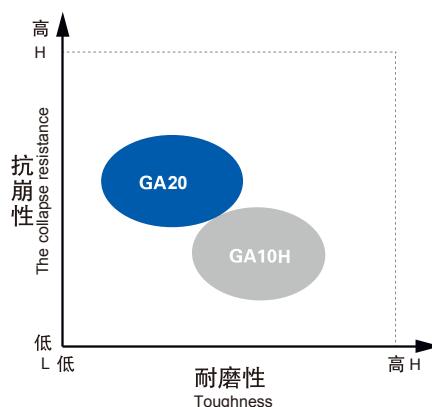

通用性强，韧性极好，适合不锈钢薄片、铜片等材质的高冲压。

Has good universal performance and toughness, is used to stamping thin stainless steel plate and copper plate.

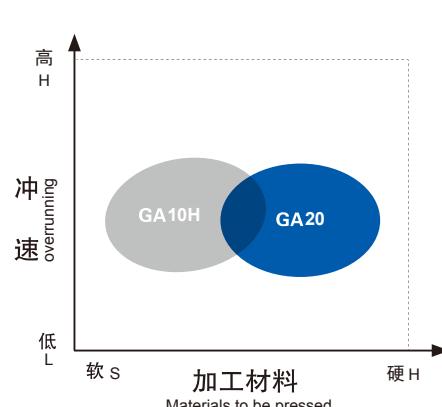

GA系列牌号关系图

Comparison of GA series Grades

GA系列牌号适用范围

Application of GA series Grades

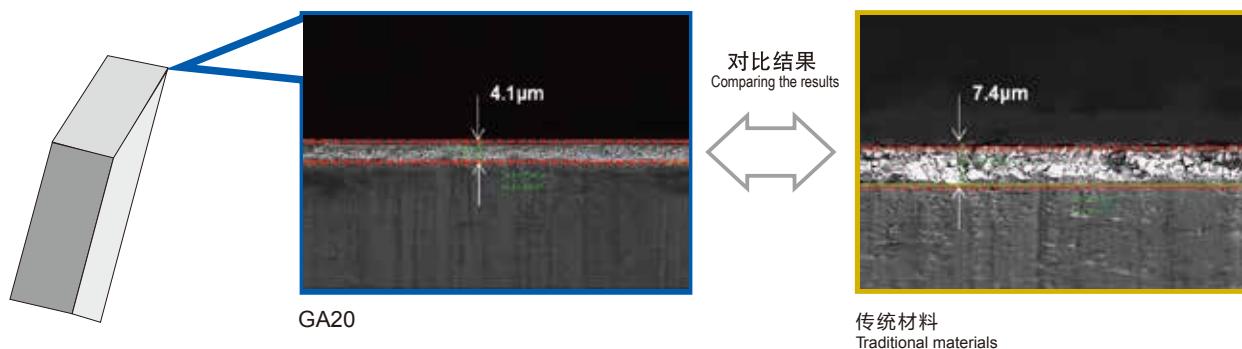

耐崩刃实验

Tipping Resistance Test

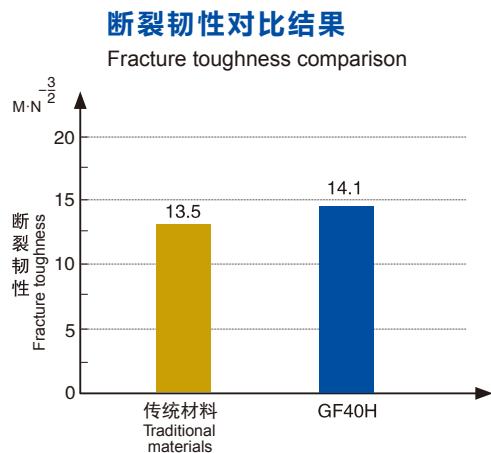

试验证明采用细晶粒牌号GA20与传统材料对比，可以将刀尖厚度缩小46%，刃口锋利性大幅提高。GA20产品利用强化技术，对WC粒度分布进行特殊控制，相比传统材料，即可维持硬度，又能保证韧性，在耐腐蚀性和抗崩性能方面有所提高。

The tests proves that comparing with conventional grades, the GA20 with fine grain size WC can make the knife-edge 46% thinner which make the knife blade much sharper and keener. Strengthening the cobalt phase in GA20 to spread the WC grain specially, this technology make the carbide contains good hardness and toughness. More than that, the carbide will have stronger corrosion resistance and tipping resistance.

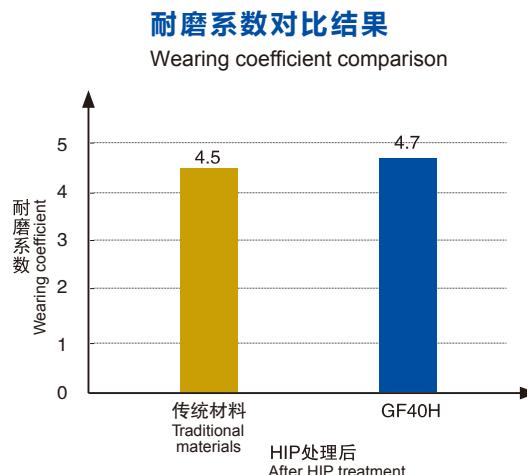

韧性、耐磨性对比

Properties Test

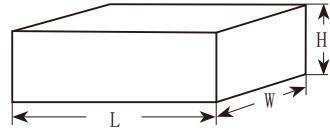

与传统材料相比，GF系列的韧性明显提高
Comparing with the conventional carbide, the 4th generation carbide GF series has much higher toughness

与传统材料相比，GF系列的耐磨性有一定提高
Comparing with the conventional carbide, the 4th generation carbide GF series has better abrasive resistance

供货态 Product status
毛坯圆环—端面平磨 Blank rings-top and bottom ground
半精圆环—端面平磨、内外圆磨削 Semi-finished rings-Top and bottom flat ground. OD&ID ground
精品圆环—根据客户需求定制 Finished rings-Produced based on customer's requirement
备注：圆环定制最大外直径为400mm Note: Max. OD of Ring is 400mm

预型件

Preform

可为客户提供冲压模具配套的异形预成型件，减少加工量及加工难度，为用户降低加工成本。

可提供通孔、盲孔、台阶孔、螺纹孔及各类台阶和槽型。

We can manufacture customized preforms of stamping mold and die. It can reduce grinding tolerance and processing difficulty. It will cost save for user.

We have ability to manufacture through hole, blind hole, step hole, threaded hole, various steps and groove types.

硬度换算表

Hardness Conversion

布氏硬度10mm球 荷重3000kg			洛氏硬度				维氏硬度 HV 荷重 30kg
标准球	Hult Green 球	碳化钨球	HRA 荷重60kg 金刚石	HRB 荷重100kg 1/6"球	HRC 荷重150kg 金刚石	HRD 荷重100kg 金刚石

注意事项

Attention

作业常识

Common Sense

1. 因硬质合金的硬度极高且具有脆性，受外力冲击容易断裂，在安装使用各种硬质合金材料时禁止敲打、抛掷硬质合金材料；操作时请充分注意安全，以免砸伤手脚。

Because of the high hardness and brittleness, the tungsten carbide is easily broken by the external force. Please do not beat or throw the tungsten carbide products while using and please pay full attention to avoid injuring by falling carbides.

2. 硬质合金在加工中可能会发生破损，因此，请务必在使用机械设备上加装安全装置及安全防护罩，操作人员务必戴好防护眼镜及安全靴。

The carbide might be broken during your procession, therefore please do add protection device and security equipment to your machines when working. And please do wear protective glasses and boots.

3. 作业时请戴手套操作，以防有与硬质合金接触后而引起过敏的人；粉尘也会对人体造成影响，请戴用防尘口罩。

Please wear gloves to avoid allergy caused by touching tungsten carbide during your work; please wear anti-dust mask because the dust caused during your operation might be harmful to human body.

4. 硬质合金中包含铁系的金属(钴和镍)，在酸性环境中会发生腐蚀(生锈)，因此，在辅助加工液的使用上请选择弱碱性。

Please choose alkalescent lubricating liquid for your processing because the carbides which contain cobalt and nickel are easily to be corroded.

放电加工

Electrical discharge machining

1. 硬质合金在线切割放电加工时可能产生开裂，因此，请在线切割加工后确认有无裂纹，再进行后续加工。

The carbide might be broken down during the electrical discharge machining. Before you go on the next processing step, please make sure there is no crack on the carbide.

2. 硬质合金的强度在放电加工后会降低，容易产生开裂等的破损，请根据具体用途设定加工条件和加工方法。

The carbides' hardness going down after EDM, please choose reasonable processing methods based on your application to avoid cracks.

焊接加工

The welding processing

1. 硬质合金在焊接加工时，可能会发生开裂，请在焊接加工后确认有无开裂情况，并对产品进行保温处理。

The carbide might be broken down during the welding processing. Please carefully check out whether there are cracks on the carbide and do heat preservation for the products.

2. 在大气中加热后，硬质合金表面会发生氧化，请在焊接加工后去除氧化部分。

Heating in the air, the surface of the carbide will be oxidized. Please remove the oxidized part of the products after the welding process.

◆ 废弃处理时的注意事项

Attentions to disposing carbide waste

1. 虽不含有Rosh对应物质等的有害物，但废弃的硬质合金会对自然界造成影响，因此，请与专业处理部门协商处理。

Though our carbide products are free of harmful substances listed in ROSH standards, but the waste carbide will affect the environment, too. If you need dispose carbide waste, please contact the professional persons.
